

K.SUMANTH RATNA URK17ME234

“Opportunity is a transformative phase in individual life, Necessity is the main root of every invention and innovation”

My name is RATNA (Class of 2017-2021). I wish to state that GOD’s blessings combined with hard effort and supportive mentors can make a student successful. On July 13th, 2017, my mother accompanied me to Karunya for admission in to B.Tech – Mechanical Engineering. Right from freshman year in Karunya, I was focused in my studies and enjoyed the academics atmosphere and the overall ambience of the campus. Karunya provided me with comprehensive exposure to a variety of mechanical engineering expertise. My thirst for knowledge was quenched by the classes I attended, lab sessions and the project I pursued in my final year. Because of my curiosity, I began to work with my mentors, Dr. Rajesh Ruban, Dr. Sabitha Jannet, and Dr. Praveen Kumar on research assignments and had a rewarding experience that resulted in remarkable credentials [14 Journals Published & 8 Patents]. It enabled me to secure admission into Ivy League Universities in USA (Top 30 in QS Ranking - Columbia University, New York University and the University of Michigan). I owe my accomplishments to GOD and am grateful to the faculty of the department who assisted and supported me during my time in Karunya. I wish to endorse Karunya as a great place to study Mechanical Engineering that gave me awesome memories to cherish.

ANJO BOB ANIL URK17ME043

Greetings!

It truly is an overwhelming experience as I ponder on my time in Karunya Institute of Technology and Sciences. In 2017 I came in as a shy, introverted first year who had absolutely no idea how I would fare after 4 years (2017-2021), but seeing where I am now, I can truly say that it was my time at Karunya that molded me to become the person I am today. When I entered Karunya Nagar for the first time, I was spellbound by the scenic beauty and the natural charm of the place. Little did I know that this very place would be the platform for my development. Not only is the location wonderful but so are the people of Karunya. I remember fondly how easy it was to converse with the faculty and staff. It was surprising because never had I imagined an establishment where the faculty put so much effort into their students. In fact, some of my fondest memories were my conversations with the faculties who genuinely wanted to see us grow to become successful individuals. The facilities were immaculate and the resources that were available to us really propelled my interest in my field of engineering. It truly was incredible the amount of resources we had to excel in academics and research. Through the extensive placement training that was offered, I was able to receive multiple offers from Infosys and other reputed companies. I can never forget the other events that we were encouraged to go to as well, not only did my time in Karunya help develop me academically but spiritually as well. I never had as many opportunities to be part of a community that truly cares for the society before. I had always wondered what it meant to be the “Light of the word”, and in Karunya I finally understood my part to play in making this world a better place to live in. To spread hope and love to a generation that is unsure of the future is truly a remarkable feat, and I’m glad I got to be a part of an Institution that truly cared about that. You won’t find many institutions that not only wants

to develop you academically but wants to see you grow holistically to the point where you are a better individual than the person who came in the beginning. I can say boldly that I am a better person because of my experiences in Karunya and I will forever be grateful to my time there. I am currently doing my Masters in Engineering Management at Texas A&M University and also working as System Analyst at NTT Data in Texas.
