

End Semester Examination – Nov/Dec – 2016

Code : 14BT2015

Sub. Name : BIOREACTOR ENGINEERING

Semester : 5

Duration : 3hrs

Max. marks : 100

ANSWER ALL QUESTIONS (5 x 20 = 100 Marks)

Q. No.	Sub Div.	Questions	Course Outcome	Marks																																				
1.	a.	<p>Assume that experimental measurement for a certain organism have shown that cells can convert – substrate carbon to biomass.</p> <p>i) Calculate the stoichiometric coefficients for following biological reactions:</p> $\text{C}_6\text{H}_{12}\text{O}_6 + a\text{O}_2 + b\text{NH}_3 \longrightarrow c\text{C}_{4.4}\text{H}_{7.3}\text{N}_{0.86}\text{O}_{1.2} + d\text{H}_2\text{O} + e\text{CO}_2$ $\text{C}_{16}\text{H}_{34} + a\text{O}_2 + b\text{NH}_3 \longrightarrow c\text{C}_{4.4}\text{H}_{7.3}\text{N}_{0.86}\text{O}_{1.2} + d\text{H}_2\text{O} + e\text{CO}_2$ <p>ii) Calculate the yield coefficients biomass with respect to substrate and oxygen supply for both the reactions. Also, comment on the differences.</p>	CO-1	15																																				
(OR)																																								
2.	a.	Derive the expression various types of toxic compound inhibition models for growth?	CO-2	15																																				
3.	a.	<p>The production of penicillin was carried out in a batch reactor and the following data were obtained.</p> <table><tr><th>Time (hr)</th><th>Glucose concentration (g/l)</th><th><i>Penicillium notatum</i> concentration (g/l)</th><th>Penicillin concentration (g/l)</th></tr><tr><td>0</td><td>100</td><td>1</td><td>0</td></tr><tr><td>10</td><td>94</td><td>2.5</td><td>2</td></tr><tr><td>20</td><td>83</td><td>3.2</td><td>3.5</td></tr><tr><td>30</td><td>76</td><td>6.7</td><td>6.1</td></tr><tr><td>40</td><td>62</td><td>12.1</td><td>8.4</td></tr><tr><td>50</td><td>50</td><td>16.8</td><td>10.7</td></tr><tr><td>60</td><td>40</td><td>25.7</td><td>15.9</td></tr><tr><td>70</td><td>26</td><td>39.3</td><td>21.7</td></tr></table> <p>Determine net specific growth rate, growth rate @40hrs, biomass and product yield coefficient, doubling time and max cell concentration if 5 gm/l of biomass is used as inoculum .</p>	Time (hr)	Glucose concentration (g/l)	<i>Penicillium notatum</i> concentration (g/l)	Penicillin concentration (g/l)	0	100	1	0	10	94	2.5	2	20	83	3.2	3.5	30	76	6.7	6.1	40	62	12.1	8.4	50	50	16.8	10.7	60	40	25.7	15.9	70	26	39.3	21.7	CO-2	15
Time (hr)	Glucose concentration (g/l)	<i>Penicillium notatum</i> concentration (g/l)	Penicillin concentration (g/l)																																					
0	100	1	0																																					
10	94	2.5	2																																					
20	83	3.2	3.5																																					
30	76	6.7	6.1																																					
40	62	12.1	8.4																																					
50	50	16.8	10.7																																					
60	40	25.7	15.9																																					
70	26	39.3	21.7																																					
(OR)																																								
4.	a.	Write a detailed notes on batch growth kinetics of microorganisms and derive the kinetic equation for various stages of growth?	CO-2	15																																				
5.	a.	Explain in detail about various methods to determine K _L a?	CO-3	15																																				
(OR)																																								
6.	a.	A strain of mold was grown in batch culture on glucose and the following data were obtained.	CO-1	15																																				

		<table><tr><th>Time (Hrs)</th><th>Cell Conc. (g/L)</th><th>Ethanol Conc. (g/L)</th><th>glucose Conc. (g/L)</th></tr><tr><td>0</td><td>1.25</td><td>0</td><td>100</td></tr><tr><td>9</td><td>2.45</td><td>2.5</td><td>97</td></tr><tr><td>16</td><td>5.1</td><td>7.5</td><td>90.4</td></tr><tr><td>23</td><td>10.5</td><td>20</td><td>76.9</td></tr><tr><td>30</td><td>22</td><td>34</td><td>48.1</td></tr><tr><td>34</td><td>33</td><td>43</td><td>20.6</td></tr><tr><td>36</td><td>37.5</td><td>47</td><td>9.38</td></tr><tr><td>40</td><td>41</td><td>50</td><td>0.63</td></tr></table> <p>Calculate,</p> <ul style="list-style-type: none">a. By fitting biomass data to logistic equation determine carrying capacity coefficient k.b. Biomass yield coefficient.c. Product yield coefficient	Time (Hrs)	Cell Conc. (g/L)	Ethanol Conc. (g/L)	glucose Conc. (g/L)	0	1.25	0	100	9	2.45	2.5	97	16	5.1	7.5	90.4	23	10.5	20	76.9	30	22	34	48.1	34	33	43	20.6	36	37.5	47	9.38	40	41	50	0.63		
Time (Hrs)	Cell Conc. (g/L)	Ethanol Conc. (g/L)	glucose Conc. (g/L)																																					
0	1.25	0	100																																					
9	2.45	2.5	97																																					
16	5.1	7.5	90.4																																					
23	10.5	20	76.9																																					
30	22	34	48.1																																					
34	33	43	20.6																																					
36	37.5	47	9.38																																					
40	41	50	0.63																																					
7.	a.	Explain the Working and principle of various air lift loop bioreactor also state its advantages and disadvantages	CO-2	1 5																																				
(OR)																																								
8.	a.	Explain the bioreactor consideration of Packed bed bioreactor with a neat sketch.	CO-2	1 5																																				
<u>Compulsory:</u>																																								
9.	a.	Elaborate on main parameters to be monitored and controlled in fermentation processes	CO-1	1 5																																				

ALL THE BEST
